

THERMOSTATIC MIXING VALVE

Description

Barberi L-Comfort Series thermostatic mixing valves are devices with mixed water on the side way and are used to regulate the water temperature. They are used in sanitary water plants, heating circuits, in heating plant, in heat generators (hang-wall boilers, wood boilers, heating pumps) and industrial water plants. Their purpose is to maintain constant the mixed water temperature of the utility even when temperature and inlet pressure could vary at the hot and cold water inlets.

These valves can be provided with inlet connections with or without check insert inside.

Product range

Article code	Description
Art. V07-AA	Thermostatic mixing valve range 20 – 43 °C – Kv 1,6
Art. V07-AB	Thermostatic mixing valve range 35 – 60 °C – Kv 1,6
Art. V07-BA	Thermostatic mixing valve range 20 – 43 °C – Kv 2,5
Art. V07-BB	Thermostatic mixing valve range 35 – 60 °C – Kv 2,5

Technical features

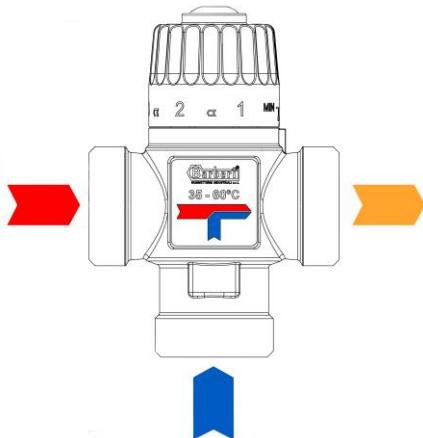

Working temperature range: **20÷43 °C - 35÷60 °C**
 Max working temperature: **95 °C**
 Accuracy of outlet mixing: **±2 °C**
 Factory pre-set temperature of mix: **40°C (20÷43 °C)
- 44°C (35÷60 °C)**
 Reference working conditions:
T hot = 65 °C
T cold = 15 °C
 Reference hot and cold pressure: **3 bar**
 Max static pressure: **10 bar**
 Max working pressure: **5 bar**
 Max difference between inlet pressures: **4 bar**
 Flow: **Kv 1,6 – Kv 2,5**
 Connections: **3/4" M – 3/4" F – 1" M**
 Fluid: **Sanitary water, water/glycol solution**
max 30%
 Reference standard: **EN1111 – EN1287**

Materials

Body of the valve: **Brass UNI EN 12165 CW617N**
 Flow regulator: **PSU**
 Gaskets: **EPDM**
 Handle: **ABS**

THERMOSTATIC MIXING VALVE

Working

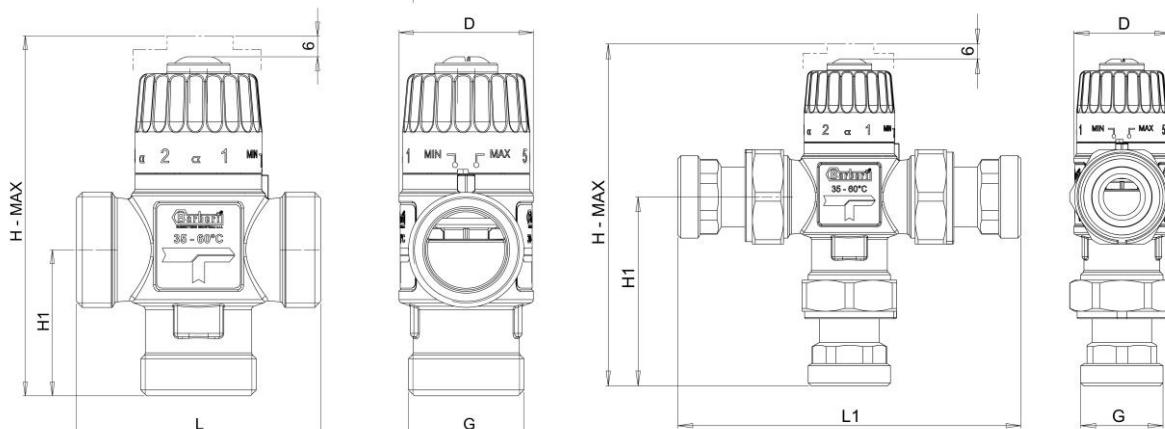

The thermostatic mixing valve L-comfort mixes hot and cold water inlets whilst maintaining constant the setted mixed water temperature on the outlet.

This thanks to the thermosensitive element in the valve that tautens or expands according to any temperature and pressure's variation, thus influencing the obturator which controls the cold and hot water inlets.

If there's any fail in the cold water inlet, the thermostatic valve L-comfort acts as safety device (according to EN1111), closing immediately the hot water crossing, thus avoiding any dangerous burn.

THERMOSTATIC MIXING VALVE

Installation

Before installing the L-comfort Thermostatic Mixing Valve, we recommend to verify working circuit conditions, for example pressure and temperature, to ensure they're in compliance with the valves' specifications. The system where the valve has to be installed has to be previously flushed and cleaned. We suggest to install suitable filters at the systems' inlets. Manufacturer's warranty on the valve could fail if debris are on the system, resulting from its non-accurate cleaning. If the system presents hard water, we suggest to treat the water with suitable instruments, before installing the L-comfort valve. The L-comfort Thermostatic Mixing Valve can be installed in any position, whether horizontal or vertical. It is important to keep the valve accessible for maintenance. To prevent back flow and bad circulation it is advisable to fit check inserts (available on request) at mixing valve inlets.

Commissioning and temperature setting

For the right commissioning of the valve, follow these instructions:

- Ensure that the system is free and cleaned from any debris.
- Temperature setting must be carried out using a calibrated thermometer. To regulate the temperature, unscrew the handle'screw, turn the same handle clockwise or anticlockwise until the desired temperature has been reached. Once the temperature is regulated, block again the screw.

Attention: whilst regulating, wait until the temperature gauge has stabilized before making other movements. The valves 20÷43°C is preset at the temperature of 40°, the valves 35÷60°C is preset at the temperature of 44°.

Reference conditions: hot Temperature= 65°C; cold Temperature= 15°C

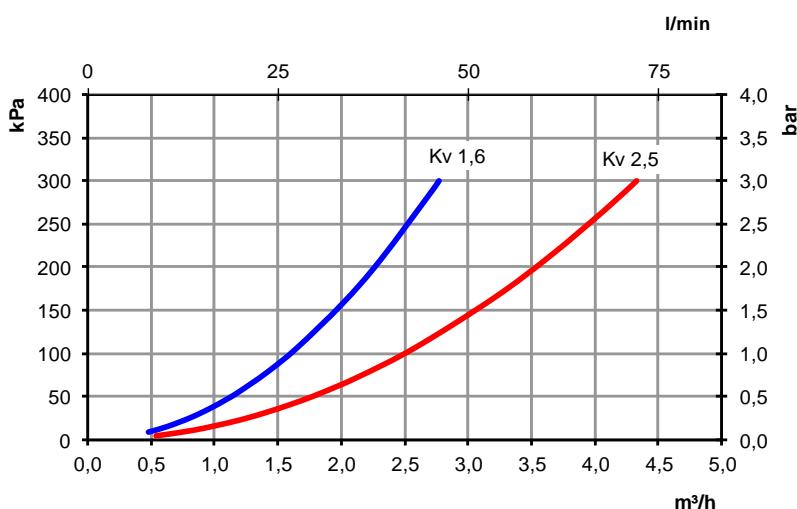

Inlet pressures equivalent: 3 bar

Maintenance

The maintenance of the system and the control of the functioning of the kit should be carried out every 12 months or more frequently if necessary. If the mixed water temperature has significantly changed compared to the previous test, we recommend to verify system's conditions, as indicated in the Installation Section and Commissioning Section.

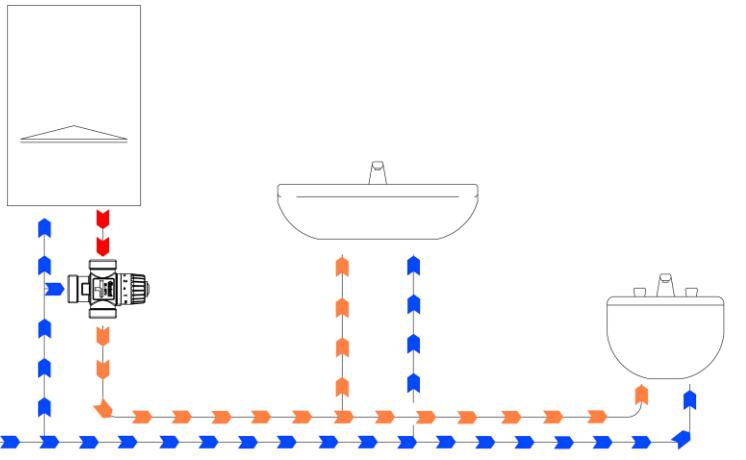

Failure to comply with the installation and commissioning instructions as detailed will invalidate the product warranty.

THERMOSTATIC MIXING VALVE

Code V07020NAA

Antiscald thermostatic mixing valve connection Rp 3/4" F. Body – alloy UNI EN 12165 CW617N. Obturator PSU. Stainless steel springs. Tightness elements EPDM. Handle ABS. Max. working temp. 95°C. Setting range 20÷43°C. Accuracy ±2°C. Max. working pressure (static) 10 bar. Max working pressure (dynamic) 5 bar. Kvs 1,6 m³/h.

Code V07M20NAA

Antiscald thermostatic mixing valve connection G 3/4" M. Body – alloy UNI EN 12165 CW617N. Obturator PSU. Stainless steel springs. Tightness elements EPDM. Handle ABS. Max. working temp. 95°C. Setting range 20÷43°C. Accuracy ±2°C. Max. working pressure (static) 10 bar. Max working pressure (dynamic) 5 bar. Kvs 1,6 m³/h.

Code V07M20NAAL2

Antiscald thermostatic mixing valve connection with adapters G 3/4" M, possibility to fit check valve. Body – alloy UNI EN 12165 CW617N. Obturator PSU. Stainless steel springs. Tightness elements EPDM. Handle ABS. Max. working temp. 95°C. Setting range 20÷43°C. Accuracy ±2°C. Max. working pressure (static) 10 bar. Max working pressure (dynamic) 5 bar. Kvs 1,6 m³/h.

Code V07M20NAAL4

Antiscald thermostatic mixing valve with compression connection mm 15, possibility to fit check valve. Body – alloy UNI EN 12165 CW617N. Obturator PSU. Stainless steel springs. Tightness elements EPDM. Handle ABS. Max. working temp. 95°C. Setting range 20÷43°C. Accuracy ±2°C. Max. working pressure (static) 10 bar. Max working pressure (dynamic) 5 bar. Kvs 1,6 m³/h.

Code V07M25NAA

Antiscald thermostatic mixing valve connection G 1" M. Body – alloy UNI EN 12165 CW617N. Obturator PSU. Stainless steel springs. Tightness elements EPDM. Handle ABS. Max. working temp. 95°C. Setting range 20÷43°C. Accuracy ±2°C. Max. working pressure (static) 10 bar. Max working pressure (dynamic) 5 bar. Kvs 1,6 m³/h.

Code V07M25NAAL2

Antiscald thermostatic mixing valve connection with adapters G 1" M, possibility to fit check valve. Body – alloy UNI EN 12165 CW617N. Obturator PSU. Stainless steel springs. Tightness elements EPDM. Handle ABS. Max. working temp. 95°C. Setting range 20÷43°C. Accuracy ±2°C. Max. working pressure (static) 10 bar. Max working pressure (dynamic) 5 bar. Kvs 1,6 m³/h.

Code V07020NAB

Antiscald thermostatic mixing valve connection Rp 3/4" F. Body – alloy UNI EN 12165 CW617N. Obturator PSU. Stainless steel springs. Tightness elements EPDM. Handle ABS. Max. working temp. 95°C. Setting range 35÷60°C. Accuracy ±2°C. Max. working pressure (static) 10 bar. Max working pressure (dynamic) 5 bar. Kvs 1,6 m³/h.

Code V07M20NAB

Antiscald thermostatic mixing valve connection G 3/4" M. Body – alloy UNI EN 12165 CW617N. Obturator PSU. Stainless steel springs. Tightness elements EPDM. Handle ABS. Max. working temp. 95°C. Setting range 35÷60°C. Accuracy ±2°C. Max. working pressure (static) 10 bar. Max working pressure (dynamic) 5 bar. Kvs 1,6 m³/h.

THERMOSTATIC MIXING VALVE

Code V07M20NABL2

Antiscald thermostatic mixing valve connection with adapters G 3/4" M, possibility to fit check valve. Body – alloy UNI EN 12165 CW617N. Obturator PSU. Stainless steel springs. Tightness elements EPDM. Handle ABS. Max. working temp. 95°C. Setting range 35÷60°C. Accuracy ±2°C. Max. working pressure (static) 10 bar. Max working pressure (dynamic) 5 bar. Kvs 1,6 m³/h.

Code V07M20NABL4

Antiscald thermostatic mixing valve with compression connection mm 15, possibility to fit check valve. Body – alloy UNI EN 12165 CW617N. Obturator PSU. Stainless steel springs. Tightness elements EPDM. Handle ABS. Max. working temp. 95°C. Setting range 35÷60°C. Accuracy ±2°C. Max. working pressure (static) 10 bar. Max working pressure (dynamic) 5 bar. Kvs 1,6 m³/h.

Code V07M25NAB

Antiscald thermostatic mixing valve connection G 1" M. Body – alloy UNI EN 12165 CW617N. Obturator PSU. Stainless steel springs. Tightness elements EPDM. Handle ABS. Max. working temp. 95°C. Setting range 35÷60°C. Accuracy ±2°C. Max. working pressure (static) 10 bar. Max working pressure (dynamic) 5 bar. Kvs 1,6 m³/h.

Code V07M25NABL2
